

## Registration for PARAKO password

The PARAKO parameterisation software can be used to adapt the system-specific switch-off limits to the grid operator's requirements. The preset parameters are described in the current data sheet.

Since the system operator may not change the settings at the inverter, the parameterisation software features a password protection. In order to change the settings, you have to plug in the parameterisation dongle and enter a personalised password. You can request this password here.

You need to declare that you are an authorised specialist company and that you will not disclose the password to the system operator. You, the person as well as the specialist company, will be held liable if the parameterisation tool is misused and the password disclosed.

Please sign and send (post, fax or e-mail) this document to our technical support team:

KOSTAL Solar Electric GmbH  
Hanferstraße 6  
79108 Freiburg i. Br.

+ 49 761-47744-222  
Fax: + 49 761-47744-111  
e-mail: [service-solar@kostal.com](mailto:service-solar@kostal.com)

I hereby request a password to allow me to permanently change the limit values for grid monitoring. I am aware of the significance and function of the parameters I will be changing and by signing declare the following:

- I will treat the password as confidential.
- I will make a change to the device settings only in coordination with the grid operator.
- I will explicitly document any change to the device settings in the corresponding documents.

Please use block capitals
