KOSTAL

Registration PARAKO Password / Service Code

The PARAKO parameterization software or the service code for the PLENTICORE plus/ PLENTICORE BI and PIKO IQ inverters can be used to adjust the plant-specific disconnection limits according to the requirements of the grid operator. Since the plant operator is not allowed to change the settings on the inverter, the parameterization software is provided with personal password protection.

Before such a password can be issued, we as KOSTAL Solar Electric require your confirmation that you are a qualified electrician from an approved specialist company and that you will not make the password accessible to the system operator.

Please scan this document, sign it, and send it as an attachment with the application or fax or mail it to our technical support:

KOSTAL Solar Electric GmbH   **Tel: + 49 761-47744-222**
Hanferstraße 6   **Fax: + 49 761-47744-111**
79108 Freiburg i. Br.   **Mail: service-solar@kostal.com**

I hereby request a password to allow me to permanently change the limit values for grid monitoring. I am aware of the significance and function of the parameters I will be changing and by signing declare the following:

- I will treat the password as confidential.
- I will make a change to the device settings only in coordination with the grid operator.
- I will explicitly document any change to the device settings in the corresponding documents.

Please use block capitals
