circuit current								
Decaying (aperiodic)	İDC	N/A	500m	72,77	90,40			
component of a short								
circuit current								
Reactance/Resistance	X/R	N/A	Time to trip	0,757	In seconds			
Ratio of source								

Self-monitoring solid state switching	Yes or N/A
It has been verified that in the event of the solid state switching device failing to disconnect the SSEG, the voltage on the output side of the switching device is	N/A
reduced to a value below 50 volts within 0.5 seconds.	

Additional comments

Unless otherwise noted all testing were done in the laboratories of the manufacturer and with the PIKO 3.6 MP, which is regarded either as representative or as worst case.
